

Helicobacter pylori: Review and Update: Review Questions

Frederick J. Hardin, MD

Richard A. Wright, MD

The questions below are based on the article "*Helicobacter pylori*: Review and Update," which begins on page 23 of this issue. Choose the single best answer for each question.

- 1. Increased prevalence of *H. pylori* infection is NOT associated with which of the following characteristics?**
 - A) Fecal-oral exposure during childhood
 - B) Female sex
 - C) Increasing age
 - D) Low socioeconomic status during childhood
- 2. Which of the following terms accurately describes the *H. pylori* organism?**
 - A) Cytotoxic protein-associated
 - B) Gram-positive
 - C) Intracellular
 - D) Nonmotile
- 3. Which of the following is NOT a histologic change associated with *H. pylori* infection?**
 - A) Atrophy of mucosal glands in longstanding infection
 - B) Intense eosinophilic aggregation
 - C) Lymphocytic proliferation in the stroma
 - D) Neutrophilic infiltration of mucosal glands
- 4. Which of the following characterizations does NOT pertain to nonulcer dyspepsia?**
 - A) Altered gastric emptying and fundic compliance may cause the disorder
 - B) The disorder is associated with altered visceral sensation
 - C) Eradication of *H. pylori* infection is usually curative of the disorder
 - D) Increased levels of serotonin may play a role in the disorder
- 5. Which of the following statements is NOT accurate regarding the diagnosis of *H. pylori* infection?**
 - A) Breath tests and stool tests can aid in diagnosis
 - B) Culture can be problematic and unreliable as a diagnostic tool
 - C) Histology is the "gold standard" of diagnosis
 - D) Serology should be a first-line diagnostic tool in low-prevalence areas
- 6. Which of the following statements regarding management of *H. pylori* infection is most accurate?**
 - A) Cure rates of 60% to 70% are acceptable
 - B) Monotherapy is comparable to multidrug therapy
 - C) Multiple acceptable treatment regimens exist
 - D) Proton pump inhibitors administered to infected patients work by inhibiting the action of antibiotics
- 7. Which of the following statements is NOT accurate regarding development of a vaccine for *H. pylori* infection?**
 - A) Antibiotic agents are likely to provide primary protective immunity
 - B) Interleukins 4 and 10 are key to providing protective immunity
 - C) The optimal route of administration has yet to be identified
 - D) Oral vaccines can induce postimmunization gastritis
- 8. Which of the following disorders does NOT yet have an established, accepted association with *H. pylori* infection?**
 - A) Gastric adenocarcinoma
 - B) Gastric mucosa-associated lymphoid tissue lymphoma
 - C) Gastritis
 - D) Iron-deficiency anemia

Dr. Hardin is a Fellow and Dr. Wright is a Professor and Chief, Division of Gastroenterology/Hepatology, Department of Medicine, University of Louisville, Louisville, KY.

For answers, see page 54.

Answers to Review Questions

Answers to the review questions asked on page 50. The article on *Helicobacter pylori* begins on page 23.

1. (B) Female sex
2. (A) Cytotoxic protein-associated
3. (B) Intense eosinophilic aggregation
4. (C) Eradication of *H. pylori* infection is usually curative of the disorder
5. (D) Serology should be a first-line diagnostic tool in low-prevalence areas
6. (C) Multiple acceptable treatment regimens exist
7. (A) Antibiotic agents are likely to provide primary protective immunity
8. (D) Iron-deficiency anemia
